- CSS/Sass
- Bootstrap/Ant-design
- JavaScript
- ReactJS/Redux
- Typescript/ReactQuery
- Git/Github

LANGUAGES

- Uzbek: Basic
- English: Pre-Intermediate
- Russian: B1-B2

EXPERIENCE

Webstar IT Academy

2022-2023

Frontend Mentor

- Webstar IT Training Center is a company that primarily deals with improving the level of web programming and computer literacy of school-age children.
- The following technologies are taught at Webstar: Html, Css, Bootstrap, Sass, JavaScript and React JS.
- This year I tried to expand my experience and convey my knowledge to my students as fully as possible.

Webstar IT Academy

2023 - PRESENT

Frontend Mentor / Frontend Developer

Webstar Quiz Project

- This project is designed for students to take tests at the end of each module. For example, if html is completed, one exam test. The test results are saved, and the students' practice results can also be entered. In this way, the average test and practice score can be viewed automatically.
- In this project I created a user-friendly design and connected it to the backend. I also created an admin panel section to manage the site.

Webstar Gamification Project

- In this project, students complete step-by-step test assignments. For each completed test, they receive a fixed grade based on the section level. They can track their history and ratings in their profiles.
- In this project my task was to create a design that would be more interesting to readers and connected to the backend. In this project I used react/redux, for the design I chose antd.
